

Marwa ZAGHBIB

Was born in Tunisia in 1987, I am a soldier's daughter who never cries !
I was fortunate enough to live, walk and breathe among the bravest of heroes.
Rigorous, polyvalent I like to be a woman in STEM.
I achieved my studies as an Industrial engineer in the high school of Foods in Tunisia specialized in Foods and Drugs processing.

I have excellent abilities of adaptation and communication, essential to work in different contexts the way I chose for several times to change from a field to another. I always used to choose the road less traveled, always striving to achievements in a very high standard. I am now a Quality Assurance Team Lead Engineer working within a mobile apps and Digital Products Company.

Serious, conscientious and well-organized, I chose to surround myself around phenomenal women who are confident and secure enough and joined INWES in 2011 after getting my Engineer's Diploma. In INWES we are united by a fearless passion for innovation. We help each other evolve and stand out in STEM. We build another future and strategies that generate results. We strive to create value for engineering field and it's what makes us special.
